

Fitting student gear with adjustable main lift webs

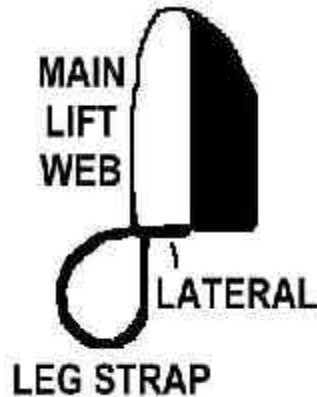

Experienced jumper rigs (usually an ideal fit because they are ordered custom)

- Fixed laterals (usually)
- Fixed size MLW
- Leg strap range to fit skydiver

Student Rigs (a huge compromise)

Experienced jumper rig compared to student rig

The Ideal versus the Practical

1. Adjustable laterals (show Vector 2)

- Show adjustment on Tandem rig
- Show how lifting rig helps adjustment
- Show how leaning over helps adjustment
- Why they can often be tacked down on student gear

2. Adjustable Main Lift Web

- Ideal is to adjust to student torso size (like experienced jumper rig)
- Tightening the MLW makes it feel like the leg straps are being tightened
- Tightening lowers the chest strap a bit but real solution is tighter leg straps

3. Adjust leg straps (tight!)
